Subject: Wilmington-Final residential well program table

Steve

Attached is the revised table concerning the proposed analytical program for the upcoming residential well sampling. In it we have updated the RL and MDL for hydrazine consistent with the final QAPP. In addition we have discussed lowering the reporting limit for formaldehyde and acetaldehyde with Test America. The reporting limits will be lowered to 30 µg/L as requested by USEPA and a 30µg/L standard will be run during instrument initial calibration. We have asked the lab to make that a permanent change for future RI/FS analyses. As with all data, the data validation process will determine the final reporting limits.

Peter
